Technology Leader in Wide-Format Digital Printing

NoeCha designs, produces and sells wide-format inkjet UV-LED printers. NoeCha's printing systems have been designed to deliver outstanding performances:

- Photographic quality, unmatched in the market today
- High level of reliability
- Low operational cost
- Great level of versatility offering new market opportunities
- Compliance with safety regulations and environmental requirements

NoeCha1 and NoeCha DOT1 represent a unique solution to produce high quality print directly on any type of rigid material.

NoeCha s.r.l., based in Italy, is a high-tech company founded in 2010 with the goal to develop a wide format digital flatbed printer setting new standards of quality and productivity on the digital graphic art market.

NoeCha's vision is to lead the market of wide format digital printing thanks to a great technological leadership, strong customer relationship and freedom of action.

The success of the company is based on its team made of highly professional people with many years of experience in the printing industry as well as young graduates with high level of motivation and dedication. On September 2013 the project has convinced the Italian company, 035 Investimenti, to inject capital in NoeCha.

The heart of NoeCha's printers is their revolutionary print engine designed to host different model of the most performing printheads available on the market, offering native resolution of up to 1200 DPI with variable drop size technology using drops small as 1,5 pl.

The heads as well as the LEDs are controlled by electronics entirely developed by NoeCha and based on the most advance satellite technology allowing to transfer large amount of data in high speed. Moreover the LEDs, also designed by NoeCha, guarantee the best curing performance considering the inks and print heads specifications.

www.noecha.com

NoeCha produces high quality UV-LED curable Inks for its printers offering large colour gamut, extremely good curing performances, low odour and irritancy, and small particle size reducing maintenance of the heads and increasing their life time. In order to achieve good printability also with drop size small as 1,5 pl, the pigment is milled at Nano-scale.

NoeCha's professional and experienced team of service engineers install the printer at customer site, train operators and provide remote and on site assistance.

Our philosophy being to provide solutions before problems appear, we will monitor your installation from day 1 and assist you in your daily production in order to prevent rather than cure.
